

Protect your people and equipment .. e-Safety Director Workshop addresses issues affecting Plant Operation and Maintenance People. On-Line. Anytime, Anywhere.

The Curriculum we offer people interested in Plant Safety is made up of 2 of the modules Plant Managers and Operators are being trained when they participate in the Plant Operation workshop (14 Modules) and a portion of a module in the Electro-Mechanical Workshop. The 2 modules (P1-P2) are listed below along with E3-Part 3. These modules are concerned with the proper personnel protection, accident prevention and damage control. We feel it is nearly impossible for implementing safety procedures to those that do not understand the processes at the plant. This curriculum makes it very understandable for a company to implement this program into their existing program.

-Plant Safety (P1, P2, E2) \$295 plus \$45 for optional Color Reference Manual

The Curriculum we offer people interested in Plant Safety is made up of 2.5 of the modules Plant Managers and Operators are being trained when they participate in the Plant Operation Workshop (14 Modules). These 2.5 modules (P1-P2, E3 Arc Flash) cover all the safety related items particular to asphalt plants designed by process control engineers with 40 years experience in the industry. Downloadable Confined Space-Lockout Templates used to comply with OSHA's requirements for the Company Provided Written Energy Control Procedures for Lockout-Confined Space. Learn about the NEW OSHA Arc Flash Protection Procedure requirements and how to keep your maintenance people safe and most effective. Don't find out a safety interlock was not working by accident. Make sure you have the latest in Safety interlocks. Know how to easily check to see if interlocks are working just by observing indicators when operating the plant. Control damage by knowing what and what not to do.

Experience for yourself what web based training is like. Any time. Even right now. Click this e-Plant Safety Workshop Sampling Link.
